

Know Your Vaccine Status!

If you are exposed to a person with measles, you may have to stay home for 21 days without proof of your vaccination.

What can you do now ?

1. Find your vaccine records or check with your healthcare provider for proof of vaccination. The vaccine is listed as the MMR or MMRV vaccine

2. If you do not have written proof of measles immunity, you should get vaccinated with the MMR vaccine.

3. Your healthcare provider may perform a blood test to check for evidence of immunity. (Must be for Measles Titer IgG)
