

Horticultural Enrichment

Horticultural Enrichment program is a wonderful program which enriches the lives of seniors and others who are living with limitations. The programs are a lot of fun for both the residents and the Master Gardener helpers. The projects are easy for some but not so easy for others, so the Master Gardeners will step in and help out.

Over the course of the six week program we all get to know one another. It's a bit like forming a temporary new family. As we get to know the residents they tell us about their favorite flowers and the gardens they grew when they were younger and they share stories and talk about their memories with us. At the end of each session each resident will complete a project that they can bring to their room and enjoy until the next week. Below are photos of Master Gardeners who participate in the program and some of the projects.
